

Light Sensors & 360° Motion Detectors

Cost: Light Sensors & Motion Detectors \$110 each

Payback: N/A

Light Sensors

Light sensors have been installed in passageways of this home. The lights come on automatically when movement is detected. The sensors have lux adjustment and timers so the lights are never left on. If there is adequate natural light in the daytime the lights will not switch on.

The advantage of sensors are that light is required only when needed thereby reducing energy costs and greenhouse gas emissions.

360° Infrascan Motion Detectors

Infrascans work like light sensors however they can detect movement in all directions ensuring lights are automatically switched off when not required. Motion detectors are ideal for walk in robes or pantries.
