

Showerheads, Toilets and Aerated Taps

Approximate Cost: Toilets \$650, Shower heads \$150.

Payback: Showerheads 2 year payback. You can also reduce your water consumption bills by up to \$100 per year by using a dual flush system over a standard single flush system.

Showerheads

The showerhead selected discharges 7.5 litres per minute. Compare this to a standard showerhead which discharges between 15 – 25 litres per minute.

The result is a saving of up to 14,500 litres of water saved per household each year. You'll also be saving on water heating costs by up to 47%.

Aerated Taps

Standard taps discharge 15 to 18 litres of water per minute compared with low-flow and aerating models which use as little as 2 litres per minute.

Dual Flush Toilets

A single flush toilet costs around \$760 to operate over a 10 year period. Compare this to an efficient dual flush toilet which costs only \$250 to operate.

The model chosen consumes only 3.5 litres per flush. This model will save approximately 51 litres per person per day over a standard single flush system.
